Test report: **RCT n° 3741001.01/E**

Protective functions: The garment offers limited protection against mechanical risks arising from impact and abrasion in case of a fall while participating in motorcycling activities: CE-Certified incorporated impact protectors provide strengthened protection.

Typical test results obtained: This PPE item has reached the following performance:  
**Class A (\*)** = light-duty protective garments: the third highest level of protection.  
EN 17092-4 garments are expected to have the least ergonomic and weight penalties.  
(see also Test Report) Protective function is linked to the correct fit of the garment - also the inner impact protectors must be kept in their place: this falls within the responsibility of the user.

(\*) = The applied Technical Draft document currently provides different levels of protection for garments including protectors/shells: from class AAA (highest level of performance) to class AA (medium level) to class A (lower level); - class B for garments not including protectors / shells = just abrasion protection; - class C for Impact protector ensemble garments.

Marking: printed on a label, including the following information:

- **CE Marking;**
- Brand (= LS2) and legal Name of the Manufacturer;
- designation (commercial name - unique, unambiguous) of the P.P.E;
- pictogram indicating intended use (motorcycling) + nr/year of the Technical Draft of reference + indication of the performance reached at laboratory test (Class A);
- pictogram about ergonomic measures (commercial sizes on a second label);
- pictogram inviting the user to read the User Manual;
- on different labels other mandatory and optional information such as: international care label symbols and materials content; warnings; lot nr, etc.
